TASK INTERLEAVING

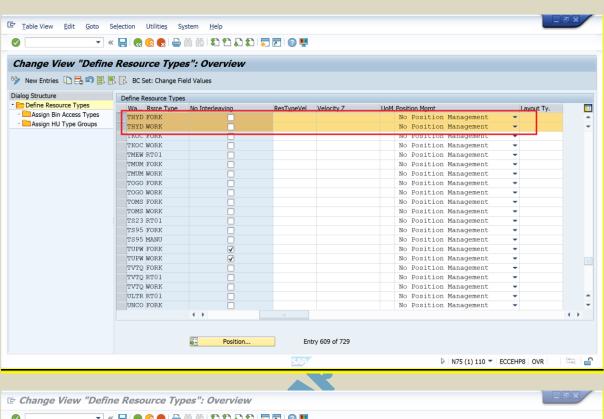

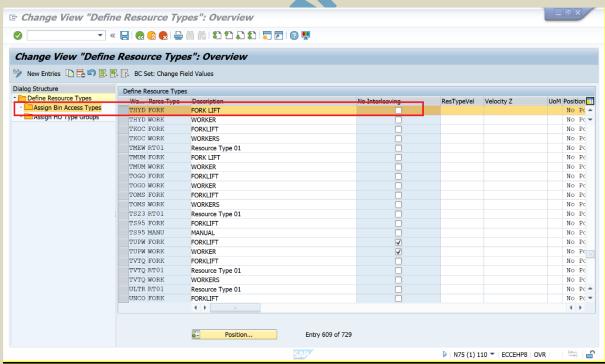

Task interleaving helps to cutdown the necessary movements and enable better optimization of unutilized resources leading to reduction of travel time and improving operational efficiency.

For example, during an inbound process, once the goods dropped to the respective storage type, a warehouse order will be assigned automatically to the same resource for picking up the goods from the same/nearest storage type. This helps in better utilization of the resources.

SPRO-IMG-SCMEWM-EWM-CROSS PROCESS SETTINGS-RESOURCES MANGAMENT-DEFINE QUEUES- DEFINE QUEUE DETERMINATION CRITERIA

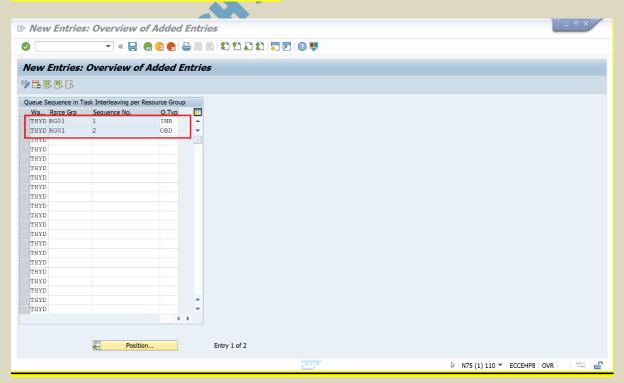

DEFIEN RESOURCES GROUP

T.CODE: /N/SCWM/RGRP

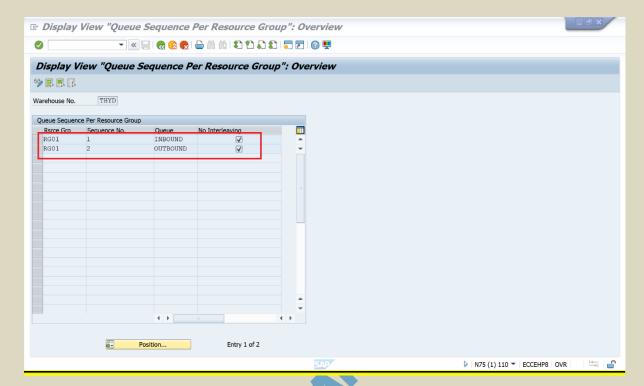

MAINTAIN QUEUE TYPE SEQUENCE

T.CODE: /N/SCWM/QTSQ

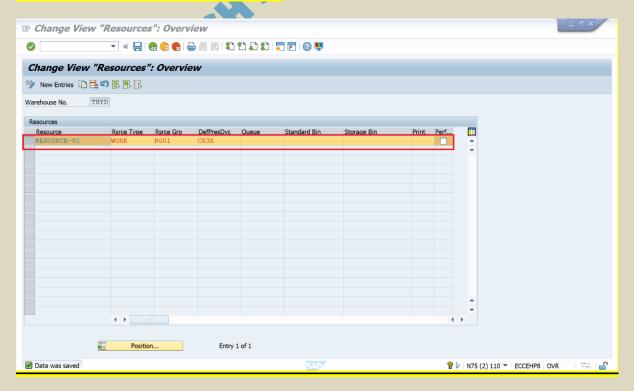

MAINTAIN QUEUE SEQUENCE FOR RESOURCES GROUP

T.CODE: /N/SCWM/QSEQ

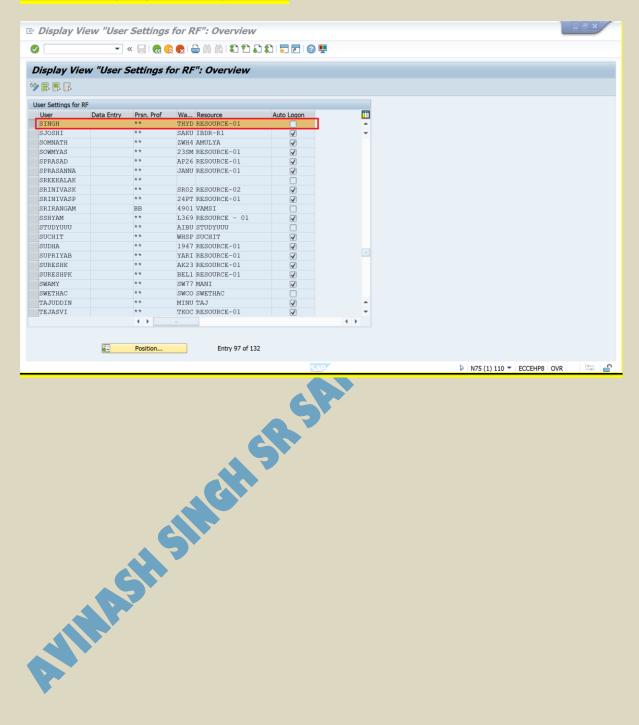

CREATE RESOURCE

T.CODE: /N/SCWM/RSRC

MAINTAIN USER ASSIGNING BY RESOURCES

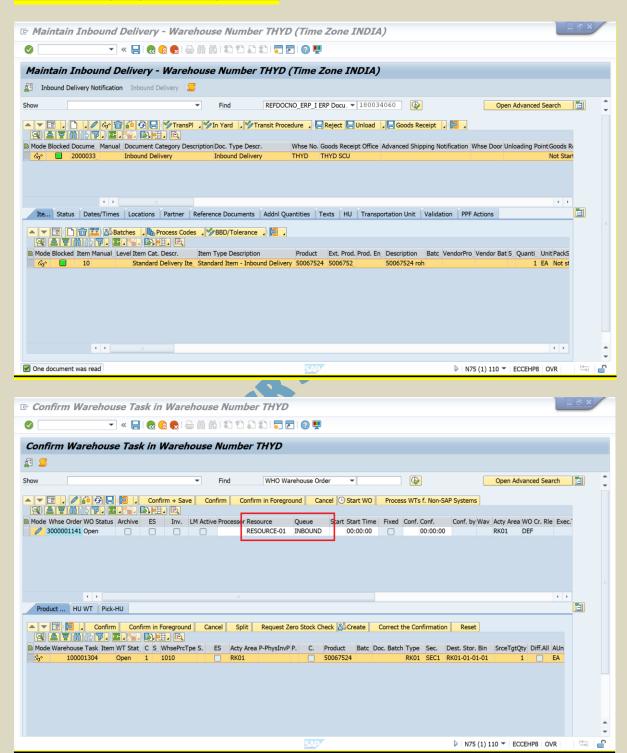

T.CODE: /N/SCWM/USER

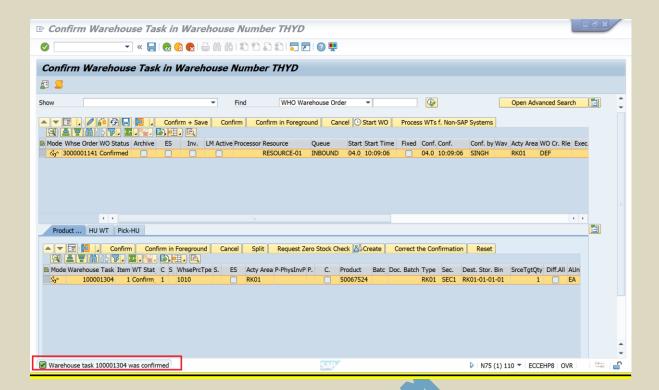

TESTING:

CREATE INBOUND DELIVERY

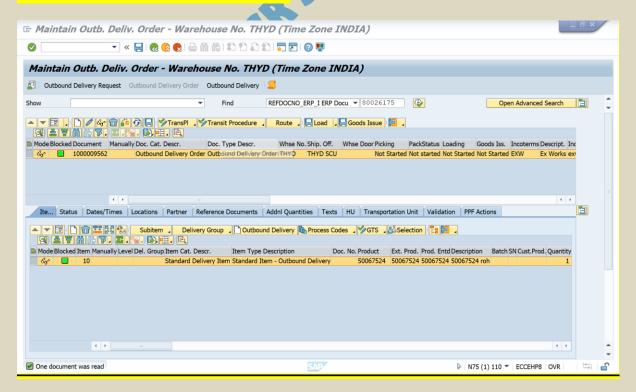

T.CODE: /N/SCWM/PRDI

CREATE OUTBOUND DELIVERY

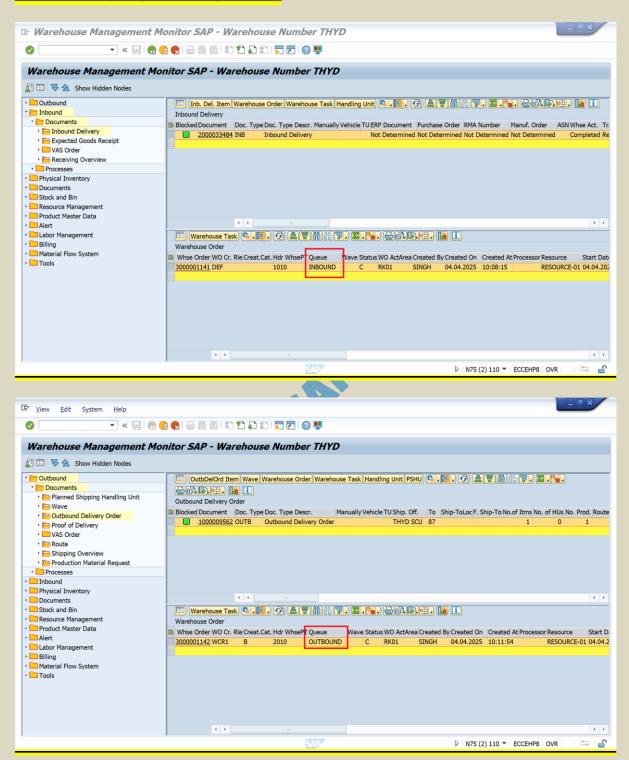

T.CODE: /N/SCWM/PRDO

CHECK IN MON SCREEN

T.CODE: /N/SCWM/MON

CONCULSION:

As per the queue type sequencing inbound queue is assigned first and then outbound queue. Hence its results are verified by executing the above test scenarios.
